

Dear Mr Nixon,

We would like to comment on just one aspect of your spectrum consultation:the 3400-3600 MHz band. The band was identified by WRC-07 for IMT usage, and we are pleased to see that MOD is considering early release/sharing. There is also a European Community Decision since May 2008, which requires the band to be made available for Broadband Wireless Access use. Therefore, we hope that operational demands will allow the MOD to act according to the first option under item 5.71, and not seek RSA for the band but release spectrum to Ofcom.

Yours sincerely

James Page
